

## Overview of the DOE Advanced Power Electronics and Electric Motor R&D Program

June 17, 2014

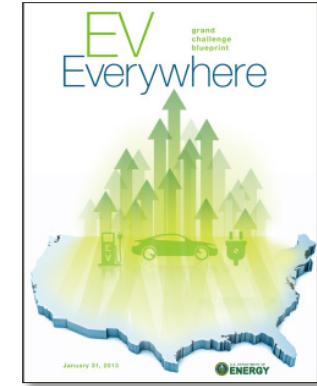

Susan Rogers  
Steven Boyd

Advanced Power Electronics and Electric Motors  
Vehicle Technologies Office

# APEEM R&D Program

Vehicle  
Technologies Office

Hybrid Electric Systems R&D

Energy Storage

Advanced Power Electronics &  
Electric Motors (APEEM) R&D

Vehicle Systems

Industry

Federal Agencies

Academia

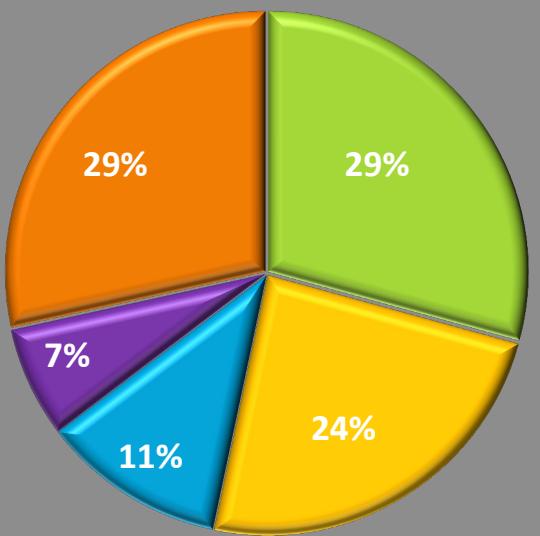

National Labs

# APEEM R&D Mission and Budget

Develop advanced power electronics, electric motors and electric drive systems to enable large market penetration of hybrid and electric vehicles

Meeting program targets will enable market success: increase performance, efficiency and reliability, while lowering cost, weight, and volume

## FY 2014 Budget

- Power Electronics
- Electric Motors
- Thermal Management
- Testing & Analysis
- FY 14 FOAs

### R&D emphasis accelerates:

- Adoption of wide bandgap semiconductors
- Reduction or elimination of rare earth magnets

### FY 2014 FOAs:

- Power Electronics - \$6M
  - Wide bandgap commercialization
- Incubator - \$1.6M
  - “Off-Roadmap” technology R&D

FY 2013

FY 2014

FY 2015 Request

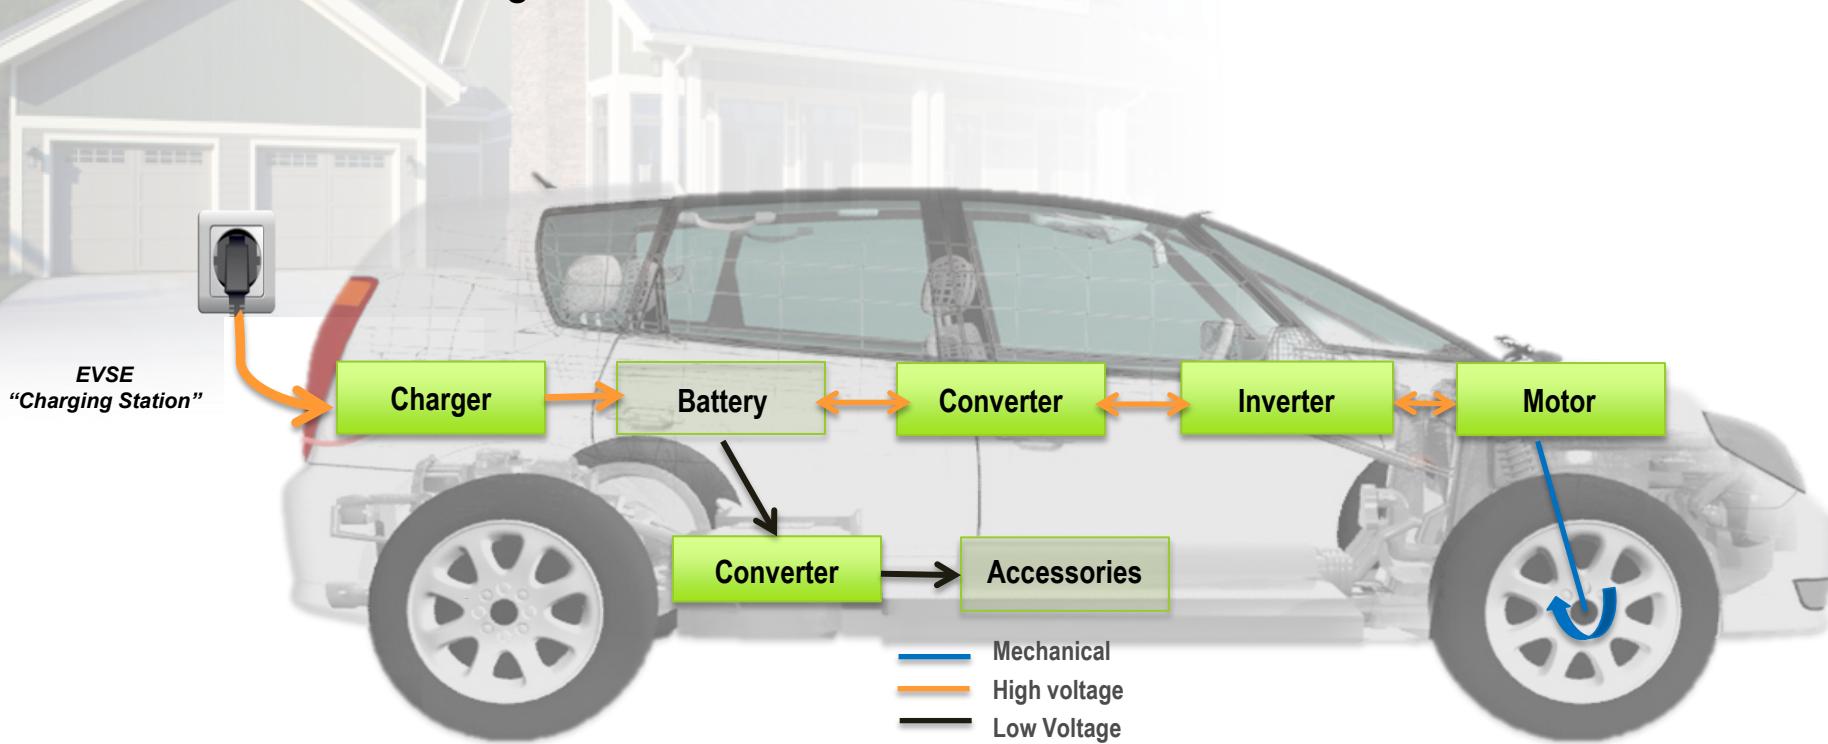

\$27.2 M

\$24 M

\$35.5 M

# Electric Drive System Components

- **Electric motor** – converts electrical energy to mechanical power for motive power
- **Inverter** – converts high voltage direct current to varying pulses that control and power the electric motor
- **Charger** – modifies and controls electrical energy to re-energize the battery
- **Converter(s)** – increases the battery voltage for the traction drive system and decreases the voltage for the accessories

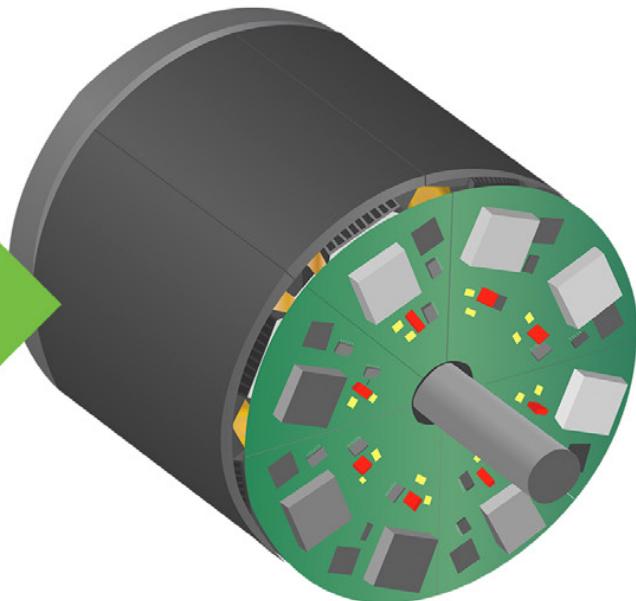

Integration of components will reduce electric drive system cost and improve efficiency

# APEEM Electric Drive System Targets

4X Cost Reduction  
35% Size Reduction  
40% Weight Reduction  
40% Loss Reduction

## 2012 Electric Drive System

\$30/kW, 1.1 kW/kg, 2.6 kW/L

90% system efficiency  
(on-road status)

- Discrete Components
- Silicon Semiconductors
- Rare Earth Motor Magnets

## 2014 Electric Drive System

(R&D target)

\$15/kW

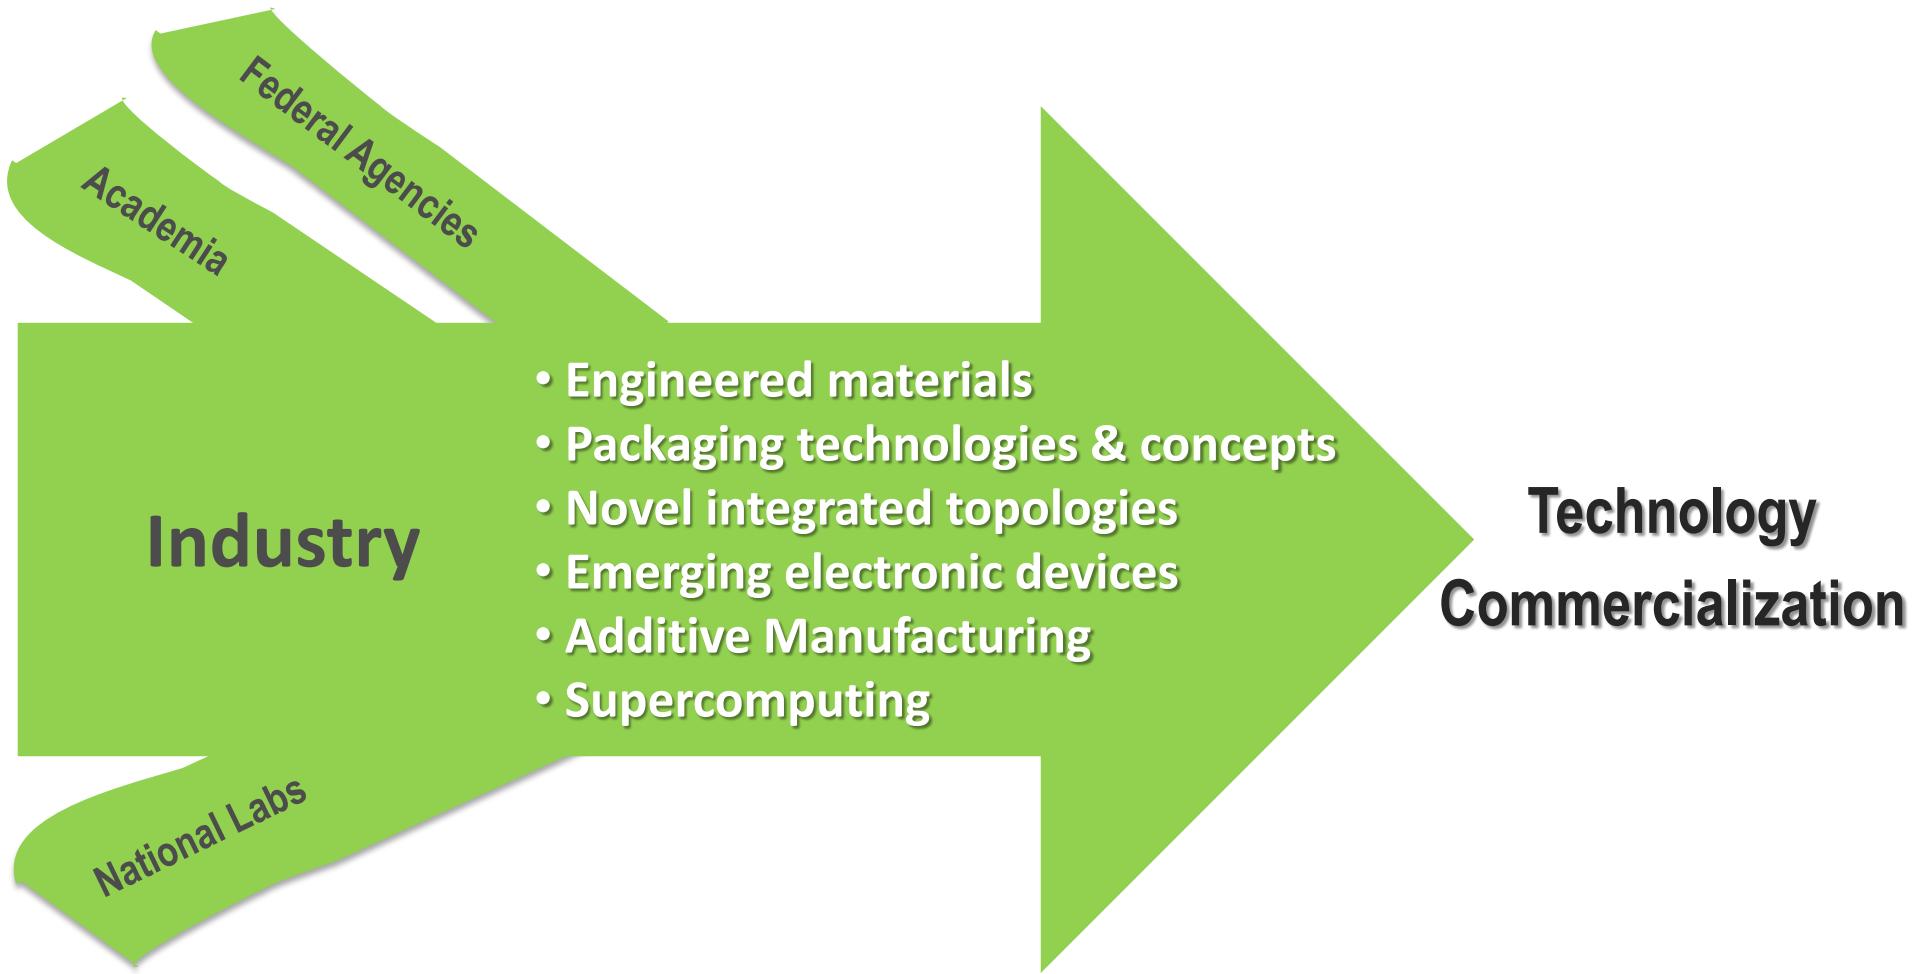

## 2022 Electric Drive System

\$8/kW, 1.4 kW/kg, 4.0 kW/L

94% system efficiency  
(R&D target)

- Fully Integrated Components
- Wide Bandgap Semiconductors
- Non-rare Earth Motors

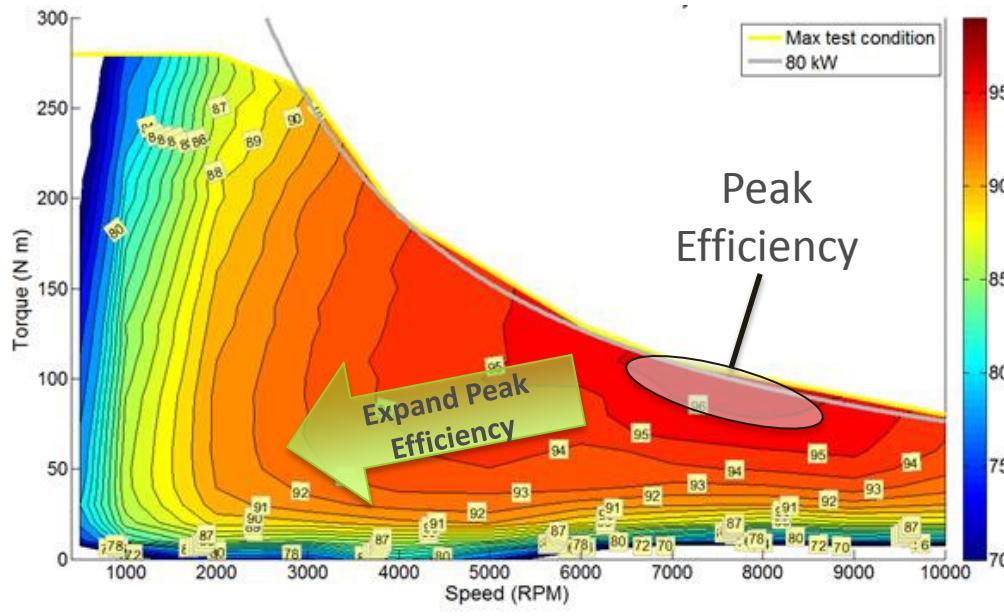

# Innovations are Required to Achieve Targets

**Volume manufacturing of incremental improvements will not achieve APEEM targets**

# Electric Drive System Challenges

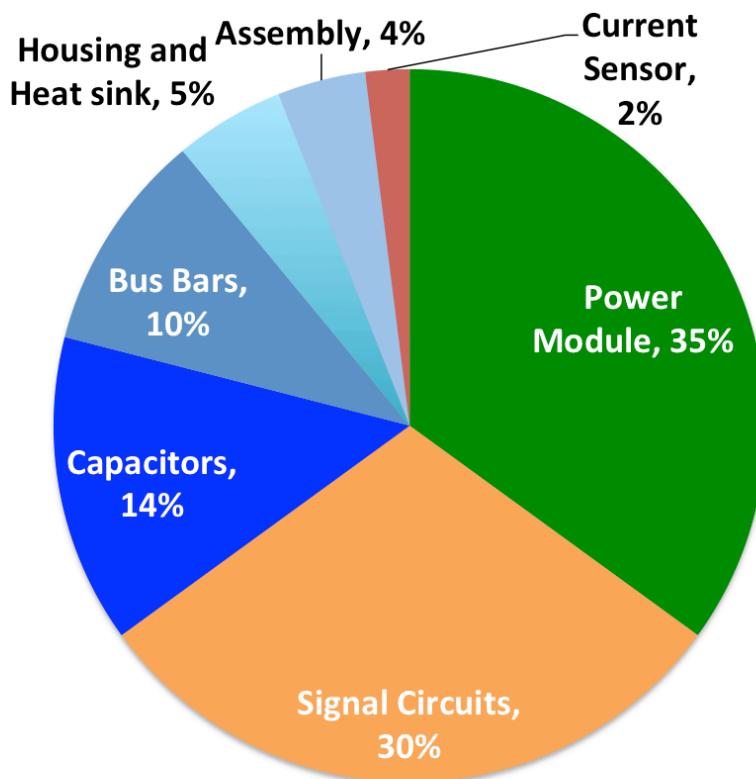

- Cost reduction is the most significant challenge
  - 4X cost reduction required
- Weight and volume reductions
- Reliability improvements
- Efficiency improvements to increase vehicle range
- Expand regions of high efficiency operation
  - Current peak efficiency regions do not match the most frequent operating points

Typical On-road Traction Motor Efficiency Map

# Cost Breakdown for an Inverter

Current specific cost: \$13.7/kW  
2020 R&D target: \$3.3/kW

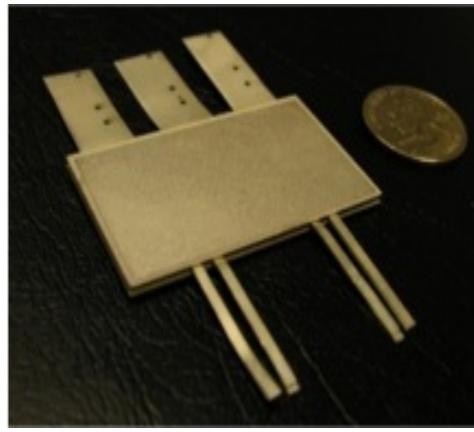

On-road Inverter Cost \$1092

# Power Electronics R&D

## Challenges

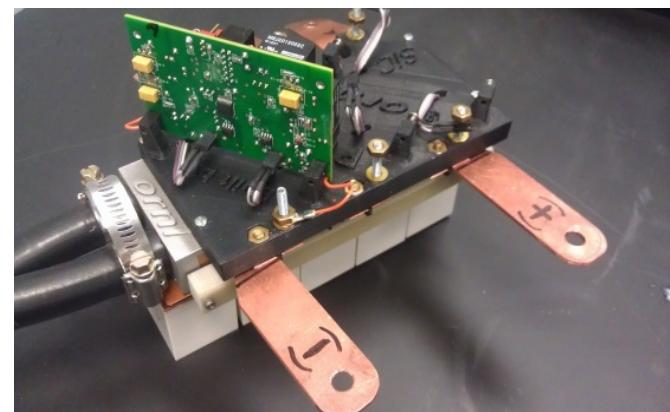

- **Cost is the biggest challenge**
  - Power module and passive components
  - Integrated, modular, scalable designs
- **Volume and weight reductions**
  - Driven by passive device size
  - Packaging issues exist at all levels
- **Packaging and advanced materials**
  - High-temperature operation
  - Increase thermal conductivity
- **Reliability**
  - Electrical interconnects, interface materials, substrates and epoxies
- **Thermal management**
  - Improve heat transfer
  - Liquid cooling to air cooling
  - Single-sided to double-sided
- **Efficiency**
  - Utilize WBG devices
  - Reduce parasitic losses
  - Optimize efficiency at the most frequent operating points

**SiC Phase Leg Power Module  
Prototype  
100A/1,200V**

## Strategies

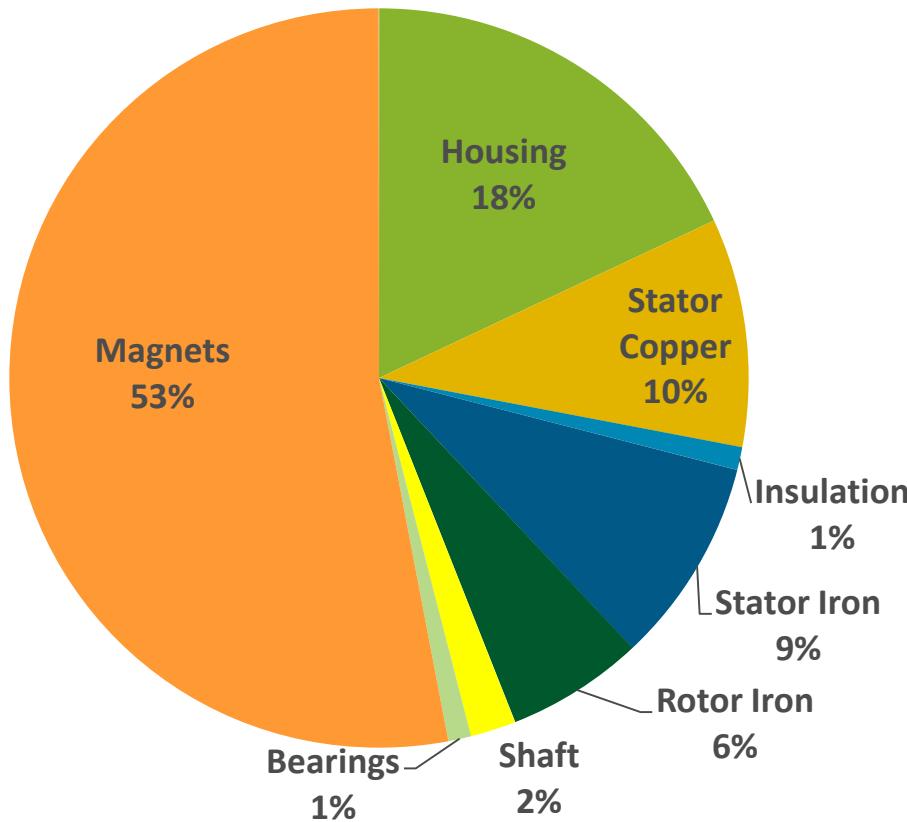

- **New Topologies and Designs**
  - Decrease cost and size
  - Improve reliability
- **WBG Semiconductors**
  - Improve performance
- **Packaging**
  - Reduce cost, size, and weight
- **Capacitors**
  - Reduce volume and weight
- **Vehicle Charging**
  - Provide function at minimum cost
- **Manufacturability**

**Additive Manufacturing Prototype Inverter**

# Cost Breakdown for an IPM Motor

Current specific cost: \$11.7/kW  
2020 R&D target: \$4.7/kW

On-road Motor Cost \$938

# Electric Motors R&D

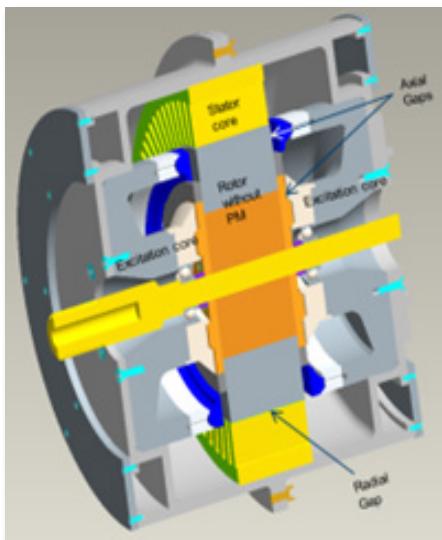

## Challenges

- **Cost is the biggest challenge**
  - Rare earth cost and uncertainty
  - Uncertainty of copper prices
- **Packaging and advanced materials**
  - High-temperature capability
  - Increase thermal conductivity
- **Volume and mass reductions**
  - Higher operating speeds
  - Low loss laminations
  - Higher slot fill (round vs. rectangular wire)
- **Thermal management**
  - Temperature limitations of existing materials
  - Improve heat transfer
- **Reliability**
  - Welds, solders, connectors, insulation
  - Epoxyes
- **Efficiency**
  - Optimize efficiency at the most frequent operating points

ORNL Non-Rare Earth Motor  
Prototypes

## Strategies

- **Non-Rare Earth Permanent Magnet (PM) Motors**
  - Reduce cost and maintain performance
- **Non-PM Motors**
  - Reduce cost and improve performance
- **Magnetic Materials**
  - Reduce cost
  - Improve high-temperature performance
- **Innovative Materials**
  - Improve performance and reliability
- **Manufacturability**

# Who We Work With

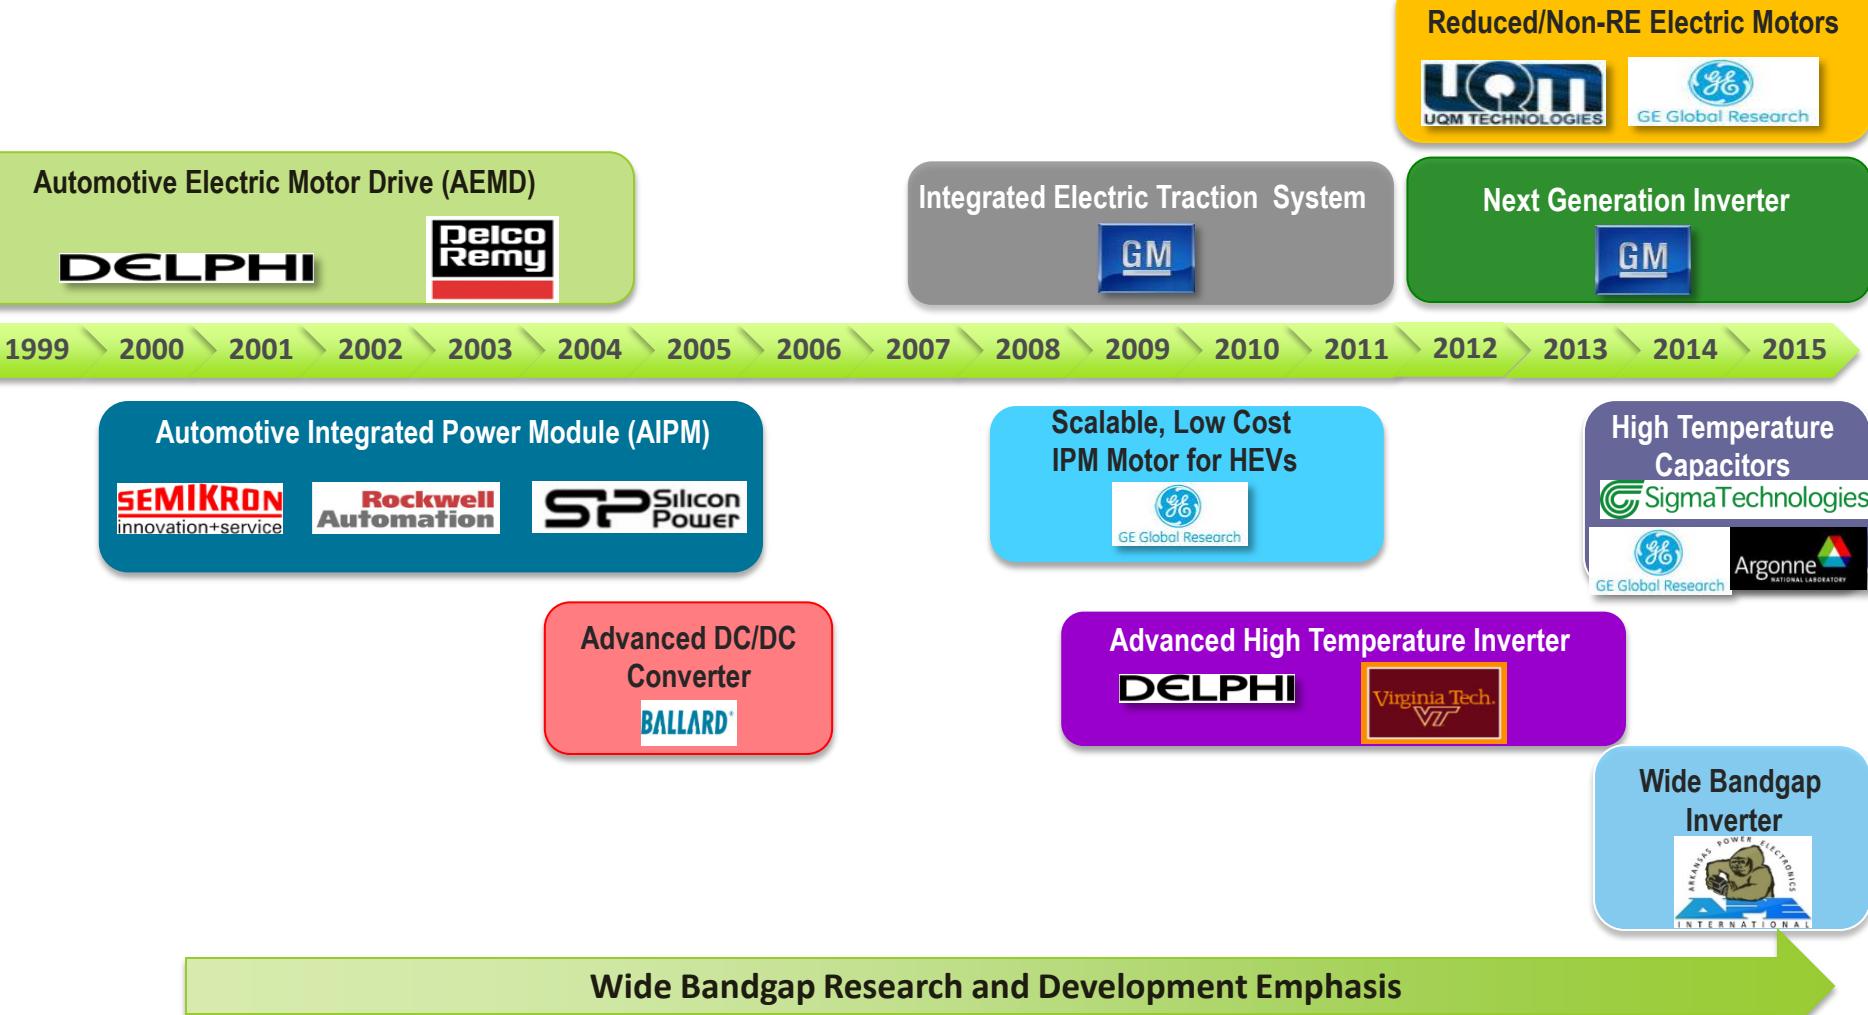

## Federal Agencies

## National Labs

# Timeline of Successful Industry R&D

# Commercialization of Innovations

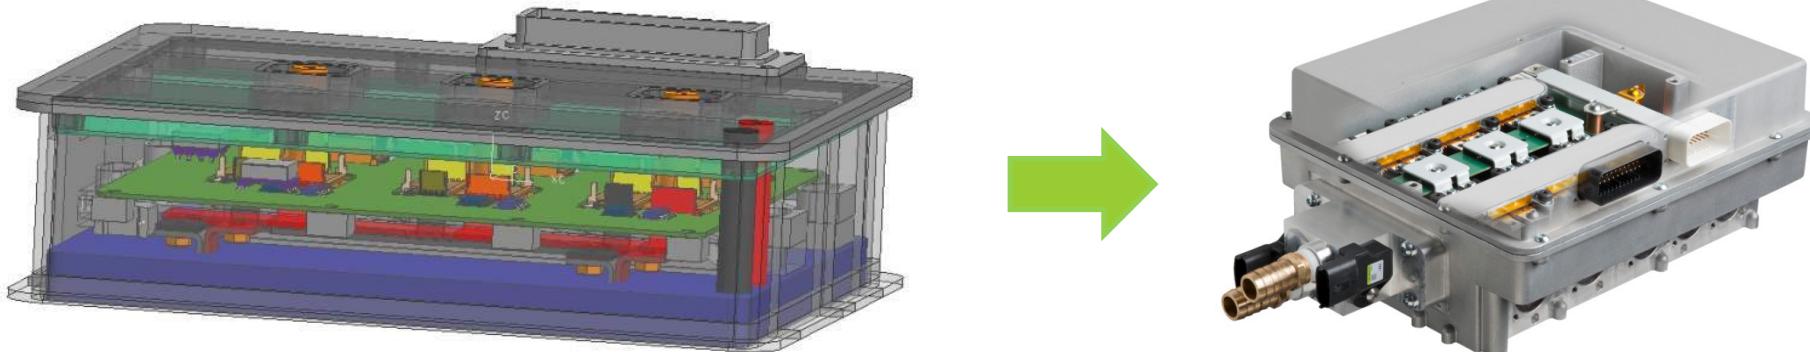

- Automotive Electric Motor Drive (AEMD) – **DELPHI**
  - Developed and demonstrated motor manufacturing Innovations
  - Surpassed cost target by 39%
- Automotive Integrated Power Module (AIPM) – **SEMIKRON**  
innovation+service
  - Established 1<sup>st</sup> Semikron power electronics manufacturing plant in the US
  - Packaging innovations utilized by US OEM fuel cell vehicle
- Advanced DC/DC Converter – **BALLARD**
  - Developed innovative packaging topologies which reduced volume and weight
  - Technologies used in US OEM hybrid-electric vehicles
- Integrated Electric Drive System – **GM**
  - Motor winding and control algorithm innovations to optimize power and torque
  - Met 2010 electric drive system cost target
- Advanced High Temperature Inverter – **DELPHI**
  - Packaging, switch, & capacitor advances
  - Technology innovations led to inverter production
- Scalable, Low Cost IPM Motor for HEVs – 
  - Rare earth magnet manufacturing advances
  - High temperature magnet operation with significant loss reduction

# R&D Projects Lead to Commercialization

## Delphi R&D of Advanced Inverter with Integrated Controller met APEEM 2015 R&D targets

- Delphi going to production with an inverter based on technology innovations developed with DOE
- National lab expertise and facilities provided project support, including: capacitor development and testing, power device characterization and system modeling, thermal/heat exchanger experiments and interface material characterization, and inverter system testing

Metrics	DOE Specified	Delphi Achievement*
Cost	\$5/kW	\$5/kW
Specific Power	12 kW/kg	17 kW/kg
Power Density	12 kW/L	15 kW/L

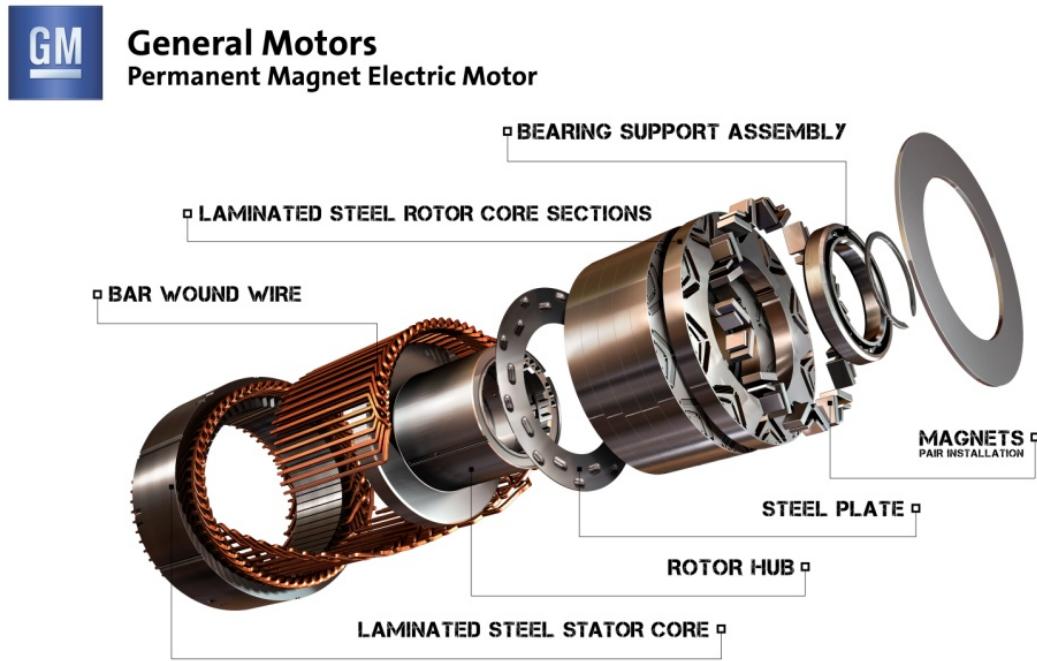

\* Based on production intent design using PEEM technologies – assuming volume of 100,000 units/year, cost/kW would be lower for upper end of 55-120 kW power range and higher for lower end of power range; kW/kg and kW/L would be higher for upper end of power range and lower for the lower power.

# R&D Projects Lead to Commercialization

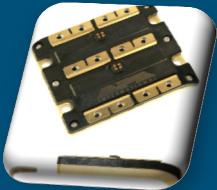

GM is the first U.S.-based automaker to manufacture electric motors in America

- White Marsh, Maryland facility built as part of cost shared DOE Recovery Act project
- Motors used in Chevrolet Spark EV
- Spark EV electric motor produces 140 hp and 400 lb-ft of torque

# Current Industry-led R&D Efforts

## Power Electronics

WBG Inverters for EV Traction Drives\*

APEI

High Performance dc Link Film Capacitors\*

GE

High Temperature Capacitors for PE\*

Sigma Technologies

Small, Lightweight Low Loss Magnetic Materials for Passive Inductors (SBIR)

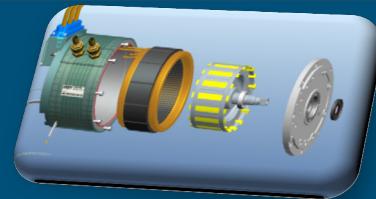

Aegis Technology

Next Generation Inverter

GM

\* New Awards Since 2013 AMR

## Electric Motors

High Performance Permanent Magnets for Advanced Motors (SBIR)

Electron Energy Corporation

Alternative High-Performance Motors with Non-Rare Earth Materials

GE

Development of Advanced Soft Magnetic Nanocomposite Materials with Low Loss (SBIR)

Spectrum Magnetics

Unique Lanthanide-Free Motor Construction

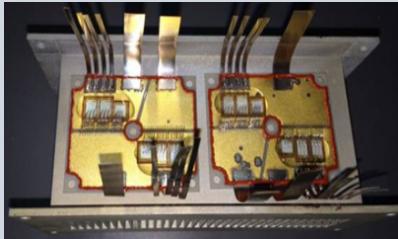

UQM

# National Lab Inventions Accelerate Innovations

## *Expertise and Unique Capabilities*

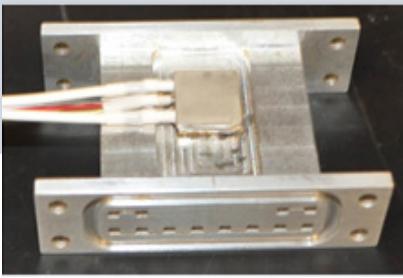

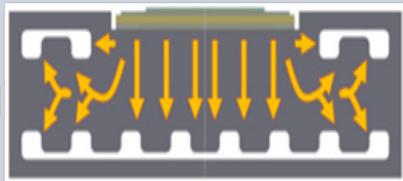

### ORNL

- Power electronics
- Packaging
- WBGs
- Electric motors

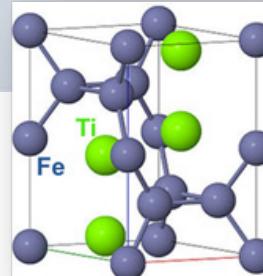

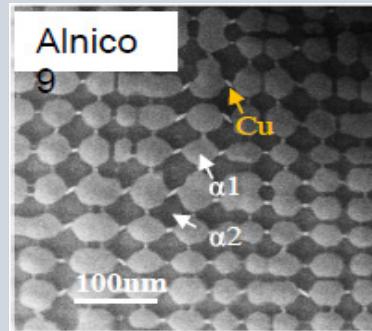

### NREL

- Thermal management & reliability

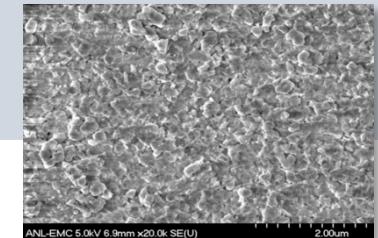

### Ames

- Magnetic materials

### ANL

- High temperature capacitors\*

\* New Award Since 2013 AMR

# ORNL Integrated Charger/Converter Project Leads to Commercialization

## Exclusive license granted to Arcimoto, Inc.

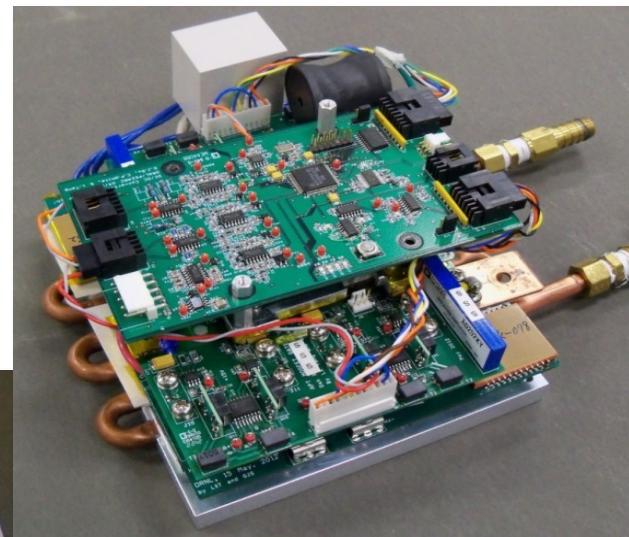

- Eliminates the need for a stand-alone external charger
- Capable of safe, high-temperature operation
- Integrates three innovations developed under

### APEEM R&D Program:

- Innovative dc-ac inverter
  - Battery system charger
  - dc-dc converter
- Enhancements include:
    - Efficient bi-directional charging
    - Improved electric motor control
    - Reduced cost and weight

Integrated Charger & dc-dc Converter

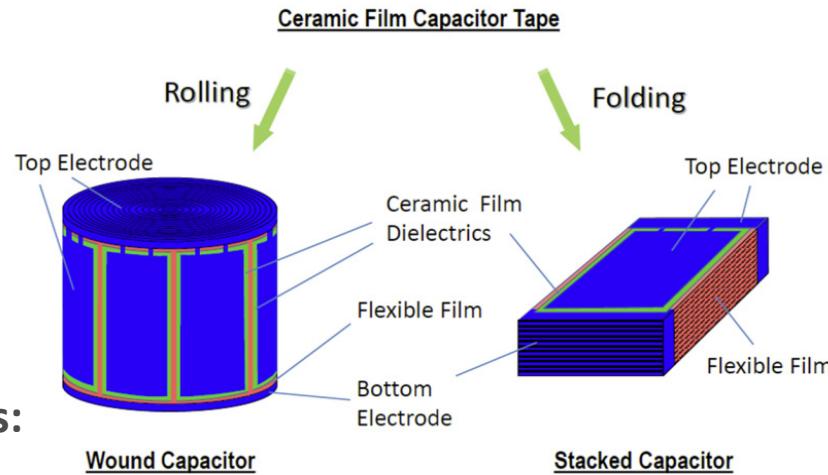

dc-ac Inverter

Patent	Inventor	Patent Number	Issue Date
Electrical Motor/Generator Drive Apparatus and Method	G-J Su	8,373,372	February 12, 2013
Electric Vehicle Recharging and/or Supplying Electrical Power	G-J Su	61/709,529	October 4, 2012
Electric Vehicle System for Charging and Supplying Electrical Power	G-J Su	7,733,039	June 8, 2010

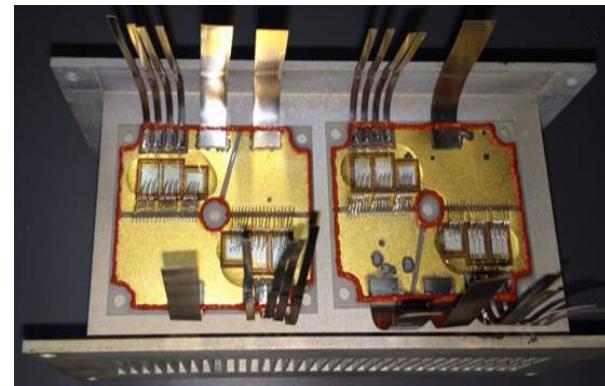

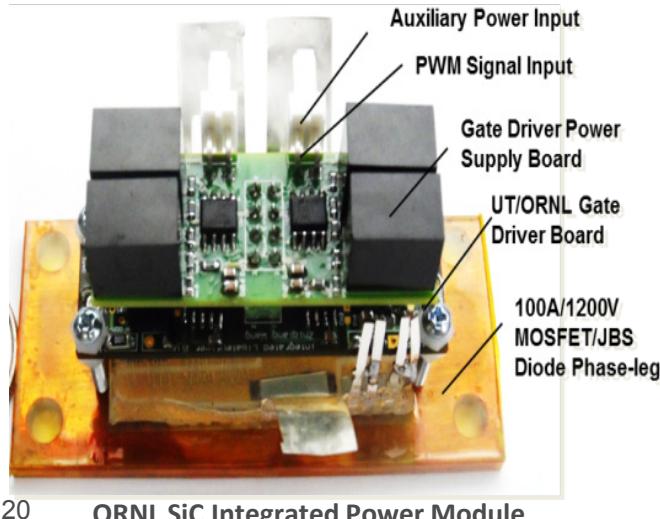

# Power Electronics FY 2013 Progress

- ANL demonstrated an aerosol deposition process for film-on-foil ceramic capacitor

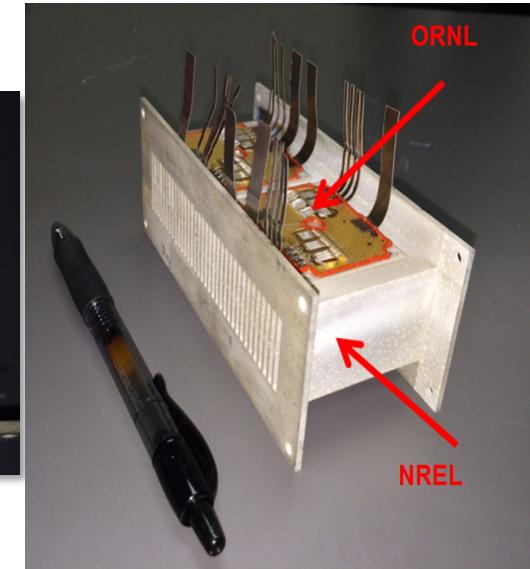

- Prototypes of integrated ORNL & NREL inventions:

- Exploited superior attributes of WBG devices
- Integrated double-sided cooling and optimized heat exchangers
- Integrated functionality reduced cost, part count, and size
- Reduced passive component requirements
- Validated innovative topologies, materials, and packages

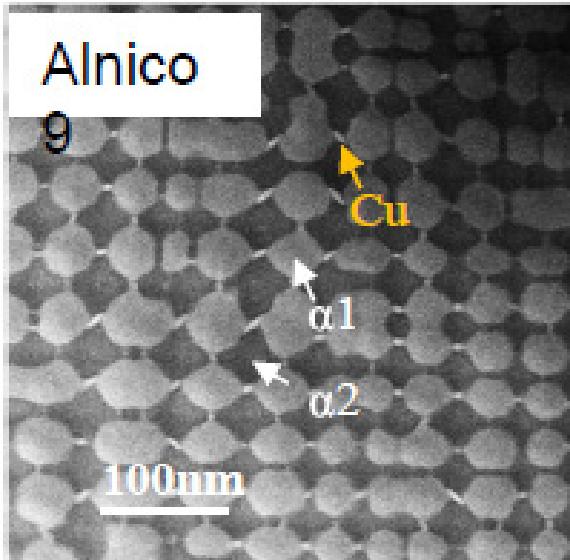

ORNL/NREL Single phase power module  
for air cooled inverter

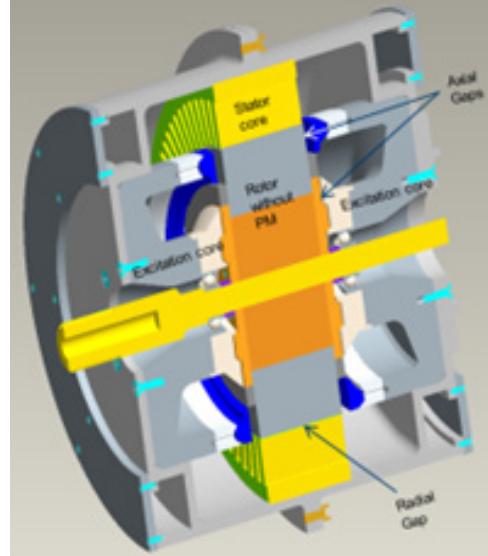

# Electric Motors FY 2013 Progress

Optimized scalable, non-rare earth electric motor designs:

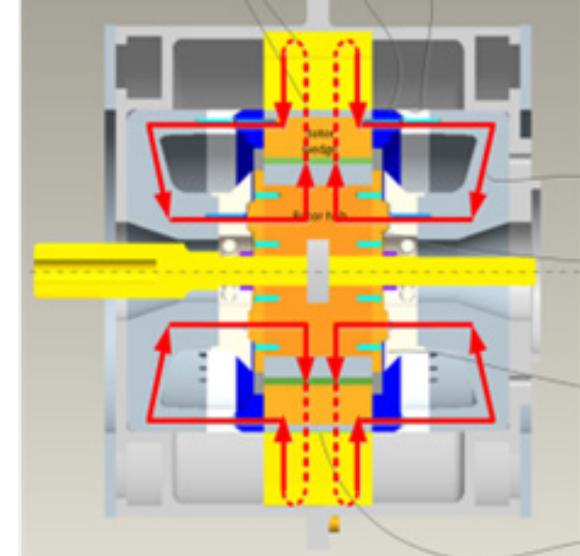

- Developed unique tools for advanced modeling and implementation on parallel computing systems to optimize new motor technologies
- Developed process for lamination steel with high Silicon content (~6.5%) to reduce iron losses and improve efficiency by up to 40%
  - Designed and implemented new materials characterization system
  - Impacted materials development and advanced modeling
- Validated improved properties of commercial and developmental high silicon steel
- Demonstrated improved alnico magnetic properties

Ames Magnet Alloy

ORNL Non- Rare Earth Motor Prototype

# Recent Patents

## Patents Filed:

- K. Bennion and M. Thornton, "Parallel Integrated Thermal Management," Application No. 13/035,082, Notice of Allowance Received May 15, 2014.
- B. Ma, M. Narayanan, U. Balachandran, S. Chao, S. Liu, "Method for Fabrication of Crack-free Ceramic Dielectric Films", US Patent Application 2014/0120736 A1, published on May 1, 2014.
- M. R. Fairchild, R. S. Taylor, C. W. Berlin, C. W. Wong, B. Ma, U. Balachandran, "PLZT Capacitor on Glass Substrate", US Patent Application filed on October 22, 2013.
- M. Chinthavali, "Gas Cooled Traction Drive Inverter," App. No: 14/016,327, DOE-S No. S-124,056, September 3, 2013.
- T. Burress and C. Ayers, "Reluctance Motor," App. No.: 13/944,731, DOE-S No: S-124,185; July 17, 2013.
- M. Narayanan, B. Ma, U. Balachandran, S. E. Dorris, "Method for Producing Thin Film Electrodes", US Patent Application 2013/0071670 A1, published March 31, 2013.

## Patents Issued:

- B. Ma, U. Balachandran, S. Chao, S. Liu, and M. Narayanan, "Method for Fabrication of Crack-free Ceramic Dielectric Films", US Patent No. 8,647,737 B2, issued on February 11, 2014.
- K. Bennion and J. Lustbader, "Integrated Three-Dimensional Module Heat Exchanger for Power Electronics Cooling," Patent No. US 8,541,875 B2, September 24, 2013.
- G-J. Su, "Electrical Motor/Generator Drive Apparatus and Method," US Patent No. 8,373, 372; DOE-S No. S-115,264, February 12, 2013.
- Z. Liang et al., "Power Module Packaging with Double Sided Planar Interconnection and Heat Exchangers" Patent No. US 2013/0020694 A1, published January 24, 2013.
- J. Hsu, "Substantially Parallel Flux Uncluttered Rotor Machines," US Patent No. 8,330,319, DOE-S No. S-115,261, December 11, 2012.
- J. Hsu, "Flux Control and One-Hundred and Eighty Degree Core Systems," US Patent No. 8,319,464, DOE-S No. S-115,303, November 27, 2012.

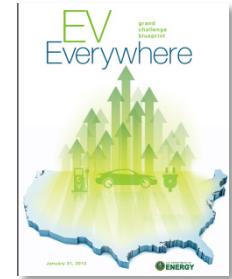

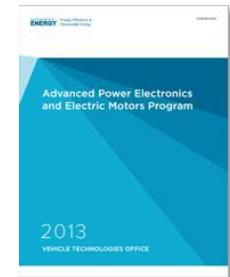

# Recent Inventions and Disclosures

## Records of Invention/Disclosures:

- G. Moreno, K. Bennion, and S. Narumanchi, "Two-Phase System for Cooling a Vehicle's Electric Motor and Power Electronics," ROI submitted May, 2014.
- B. Ma, U. Balachandran, S. E. Dorris, T. H. Lee, "Method For Making Wound Or Stacked Ceramic Films Capacitors With Enhanced Breakdown Strength," Record of Invention ANL-IN-14-038, reported on April 3, 2014.
- K. Bennion, J. Lustbader, and R. Farrington, "Multiple Mode Cooling System for Power Electronics," ROI-14-42, February, 2014.
- D. DeVoto and C. King, "Liquid thermal interface material for electronic component cooling and attachment," ROI-14-21, December, 2013.
- A. Wereszczak, D. DeVoto, and P. Paret, "Perimetric Structure for Improved Reliability in Electronic Device Interconnection," Invention Disclosure DOE-S No. S-124,788, October 2013.
- C. Ayers and J. M. Miller, "Hybrid Transflux Motor utilizing Variable Flux Intensifying and Weakening Operation," Invention Disclosure IP-1250, September 10, 2013.
- B. Radhakrishnan and J. M. Miller, "Additively Manufactured Fe-6.5 Si wt. % Si steel Cores for Motor Applications," Invention Disclosure IP1247, September 9, 2013.
- M. Chinthavali, "Novel Power Module Packaging Concept with Ceramics," DOE-S No.: S-124,595, Disclosure No.: 201303015, February 13, 2013.
- G. Moreno, et al., "Two-Phase Heat Exchanger for Power Electronics Cooling," Record of Invention-13-00036, February 2013.
- K. Bennion, J. Cousineau, and J. Lustbader, "Thermal Short-Circuit for Enhanced Power Electronics Cooling," ROI-14-10, November, 2013.
- D. DeVoto, P. Paret, and A. Wereszczak, "Perimetric Structure for Improved Reliability in Electronic Device Interconnection," ROI-14-20, November, 2013.
